Sir,

I have the honor to forward herewith copies of correspondence ending with letter No. 1764 dated the 7th Instant from the Dist. Medl & Sany Officer, Hassan Dist. with my marginal remarks thereon reporting on the ~~xxxx~~ arrangements to be made for general sanitation and medical relief during the ensuing jatra at Sravanabelagula. Sub Assistant Surgeon Mr. Anantarama Iyengar on inoculation duty in the Mysore District, has been deputed to be special Sanitary Officer to the Jatra with 1st class Hospital Asst. T.Nanjundayya to help him and directed to carry out his duties under the general supervision of the Dist. Medl & Sanitary Officer

I have the honor to be,

Sir,

Your most obedient servant,

M.D.,
Lt.Col.-I.M.S.
Sanitary Commissioner, M.G.

BMRG

Enclosure 1387 of 26

Letter No. 1764 of 7th March 10 from the D.M.&S.O. Hassan to the Sany. Commr.

With reference to your letter No. 4372 dated 28th Ultimo, I have the honor to report that I visited on the 4th & 5th Instants, the village of Sravanabelagula, which is situated at the foot of the two hills called Doddabetta and Chikbetta, a rough sketch of which showing the sites of camping grounds proposed, of latrines and ~~wells~~ & sources of drinking water etc, is herein enclosed. The answers to the various queries are as under.

1. Sanitary Staff required;-

It has been proposed to and sanctioned by Government to entertain the following sanitary staff.

1. Sanitary Inspector.
2. One Daffedar.
3. Eight peons.
4. Twelve scavengers
5. Forty sweepers.
6. Four Sanitary carts.

I am of opinion that this staff will ~~xkx~~ meet all the requirements of sanitation and conservancy of the place.

2. Latrines;- As shown in the sketch ,12 latrines of the pattern(the plan of which is herein enclosed) are proposed to be temporarily erected on the sites marked, two latrines one for females and the other for males will be located in each of the four camps, viz Rachena hally, ~~Post~~ Basthi hally, Jaunathapura and Naganahally koppalu camps, and four others will be situated in the limits of the village. Each latrine provides seats for 10 persons. These latrines are so placed that they are far removed from sources of drinking water and are easily drained away from them. Each camp will be provided with one peon, two scavengers and 5 sweepers, so that the services of 4 peons eight scavengers and 20 sweepers will be solely utilised

for the conservancy of the camps only, leaving one Daffadar, 4 peons, 4 scavengers and 20 sweepers to look after the sanitation and the conservancy of the village. Two carts will be told off for the work in the camps, whilst the remaining two will be utilised for removing the street sweepings and night soil of the main village. The Sany. Inspector will be in charge of all the above staff under the direct orders of the Sepcial Sanitary Officer.

3. Sources of drinking water.

There are six sources of drinking water, the samples of which have this day been forwarded to the Chemical Examinaer for favour of analysis and report and the details of which are given below.

1. Rachenahally well.

It is a rectangular descending well sunk just above the bed of the Rachenahally tank. Measures 12by 10 ft. and contains 14 ft water.

II Basthi hally well.

A surface well situated in an arecanut garden. Measures 12by 9 ft and contains 4 ft of water

III Jannathapura well.

Rectangular descending well situated at the foot of the Chikbetta at its northern side. It is 12 ft square and contains 4½ ft of water.

IV Annayachari well

Situated at the foot of the Chikbetta at its eastern side Stone built, 12 ft square and contains 15 ft of water

V. Tavarekatte tank is situated immediately below the Chikbetta at its western side. It is the main source of the drinking water of the village. Measures 250 by 60 yards and contains about 3 ft at its greatest depth.

VI Halasinathopu Bhavee.

.It is a rectangular draw well, 4ft square and contains 14 ft of water.

The waters from all the wells have been ordered to be

for the conservancy of the camps only, leaving one Daffadar, 4 peons, 4 scavengers and 20 sweepers to look after the sanitation and the conservancy of the village. Two carts will be told off for the work in the camps, whilst the remaining two will be utilised for removing the street sweepings and night soil of the main village. The Sany. Inspector will be in charge of all the above staff under the direct orders of the Sepcial Sanitary Officer.

3. Sources of drinking water.

There are six sources of drinking water, the samples of which have this day been forwarded to the Chemical Examinaer for favour of analysis and report and the details of which are given below.

1. Rachenahally well.

It is a rectangular descending well sunk just above the bed of the Rachenahally tank. Measures 12by 10 ft. and contains 14 ft water.

II Basthi hally well.

A surface well situated in an arecanut garden. Measures 12by 9 ft and contains 4 ft of water

III Jannathapura well.

Rectangular descending well situated at the foot of the Chikbetta at its northern side. It is 12 ft square and contains 4½ ft of water.

IV Annayachari well

Situated at the foot of the Chikbetta at its eastern side Stone built, 12 ft square and contains 15 ft of water

V. Tavarekatte tank is situated immediately below the Chikbetta at its western side. It is the main source of the drinking water of the village. Measures 250 by 60 yards and contains about 3 ft at its greatest depth.

VI Halasinathopu Bhavee.

.It is a rectangular draw well, 4ft square and contains 14 ft of water.

The waters from all the wells have been ordered to be

bailed out by the 12th Inst.

Besides the above 6 sources of drinking water, two Absynian tube wells are being sunk, one in the bed of the tank at the foot of the Doddabetta, at its western side and the other below the bund of the Tavare katte. These wells being unpollutable, will be of great use, in case the other sources of drinking water become unfortunately contaminated.

The average daily number of pilgrims that are estimated to congregate is about 10,000 whilst the largest number that might assemble on any one day is about 20,000 which will be probably on the 29th and 30th Inst. when the important ceremony of Abhishekam is to come off.

4. Prevention of pollution of water.

Police guards have been placed over all the pools of water, the nature of which is intimated to the public by means of sigh boards pasted over them. The notices are wrtitten in Canarese to say " Water for drinking purposes only", "Water for washing purposes only" and not to be drunk."

The difficulty will be not so much in supplying the people with good drinking water as it will be in preventing them from using bad water for drinking purposes.

not unless the police service is useless. The use of prohibited water should be absolutely prevented.

5. Distributing boiled water to those who will use it. On consulting the Mutt and the Revenue authorities I am given to understand that this arrangement is not feasible as very few or none of the pilgrims are likely to avail themselves of this.

Supply boiled water ready anywhere with a large notice:- "Boiled water absolutely safe recommended for use by everybody".

6. Camp bazaar is to be located on the Eastern and Northen side of the kalyani mantap and for a furlong or so on the Chennarayapatna Belagola Road, as shown in blue in the sketch.

7. Seggregation camp is to be erected in a toupe situated on the eastern side of the Doddabetta as marked in the sketch. If permitted the relieving midwife of this Dist. and the surgery cooly from Chennarayapatna Dispensary will be posted for duty at the seggregation camp.

(3)

All right.

The Dispensary is to be located in a chunnam and brick building, which is now under construction and which is proposed to be used for Vaidyasala in future.

The owner of this building has kindly consented to place it in c arge of the Rev. authorities after duly roofing it in. It contains one main hall and 3 rooms with a varandah running on its western and northern side. ~~of it~~ The main hall it is proposed to be utilised for the Dispensary whilst the 3 rooms will accommodate about 6 persons suffering from noncontageous illness.

Isolation accomodation(?) for Contagious diseases must be entirely separated & not a part of the building proposed as a dispensary whether it is necessary that people with Cause for medicine
